Technical Skills

Programming Languages: C#, Java, C++, TypeScript (React, Node.Js, Electron)

Technologies: Android Game Dev, Unity, Godot, Git, Perforce, SQL, MongoDB, JSON, XAML, React JS

Developer Relations: Technical Advocacy, Cross-functional Stakeholder Communication, Media Outreach, Feedback Triage, Developer Workshops

Summary

Senior game software engineer with 6+ years building large-scale, live-service multiplayer systems at Riot Games and Hypixel Studios, serving **millions of players globally**. Experienced acting as the **technical bridge between developers, designers, and product teams** by gathering requirements, advocating for developer needs, and translating complex engineering feedback into actionable roadmaps.

Experience

Team Lead - Tools Engineering Hypixel Studio (September 2025 - Present)

- Lead a team of 3 engineers building live-service tools, gameplay features, and UI/UX systems used by **millions of players** focused on directly advocating for developer and player needs across product cycles
- Serve as the **primary technical voice** of the player community internally: talk directly with customers to gather requirements, synthesize feedback, and plan year-long engineering roadmaps
- Oversee all user-facing tools across Hytale's ecosystem including in-game editors and external tooling, ensuring accessibility of powerful features for a broad, non-technical audience.
- Own UI/UX requirements and collaborate with design on a third of the game's entire UI implementation

Senior Gameplay Engineer Riot Games (March 2023 - June 2025)

- Architected complex ECS systems in a **custom C++ multiplatform engine**, enabling scalable, cross-platform gameplay
- Developed core gameplay systems including block placement, world-editing brushes, and inventory
- Built in-game terrain sculpting and scene composition tools enabling UGC-driven creative gameplay
- Worked closely with designers, prototyping their ideas and then converting them to full features

Senior Game Tools Engineer Riot Games (March 2021 - March 2023)

- Reduced asset design time by 75% through a custom C++ visual nodes asset-editor
- Accelerated level design workflows with automated generation tools and in-engine level editing systems
- Lowered server costs by moving level design from server-based to client-based
- Worked on a custom Java/C# game engine where I was responsible for core gameplay features

Gameplay Engineer & Team Lead Wild Magic Studio (March 2023)

- Led a cross-disciplinary team of 6 (artists & designers) to ship a Unity-based indie title on Steam
- Provided guidance and support to junior teammates, helping them build confidence in Unity toolsets
- Managed end-to-end production tasks, from sprint planning and team coordination to handling business operations, including marketing strategy, budgeting, and Steam store logistics
- Sole engineer responsible for all core systems including save/load, physics, and gameplay features
- Created save data, loading backends, physics systems, and more gameplay features
